EDUCATION

Santa Clara University

B.S. Electrical and Computer Engineering

Santa Clara, CA

Sept 2022 – Jun 2025

Activities: Institute of Electrical and Electronics Engineers (IEEE), Association of Computing Machinery (ACM)

Courses: Data Structures, Algorithms, Operating Systems, Artificial Intelligence, Computer Architecture, Logic Design, Embedded C & Assembly, Probability & Statistics, Microelectronic Circuits, Circuits II

SKILLS

Languages: Python, C/C++, Dart, Unix Shell, JS/TS, Verilog, Matlab

Frameworks & Tools: Linux, Flutter, PyTorch, Tensorflow, Keras, Numpy, Matplotlib, Angular

Tools: Linux, Git, Docker, Google Cloud, Firebase, VS Code, JetBrains Suite

Interests: Hiking, Running, Lifting, Snowboarding, Photography, Traveling, Cars

EXPERIENCE

Software Engineer Intern

ProSomnus Sleep Technologies

Jun 2025 – Present

Pleasanton, CA

- Automate full end to end mobile applications testing and debugging using Dart and Flutter of 35+ test protocols.
- Develop a full stack mobile application with Bluetooth Low Energy peripheral devices.

Undergraduate Machine Learning Researcher

Santa Clara University

Jun 2024 – May 2025

Santa Clara, CA

- Developed modular vision transformer models using TensorFlow, Keras, and PyTorch on Linux systems.
- Researching Chain-of-Thought prompting and Backbone Branching to enhance detection transformers.
- Optimized detection transformers for satellite imagery via layer modifications and hyperparameter tuning.
- Benchmarking models through ablation studies to improve inference speed and detection accuracy.

PROJECTS & LEADERSHIP

Executive Board Member | Santa Clara University IEEE

Mar 2024 – Dec 2024

- Collaborated with professors and industry professionals to provide 200+ students with career & academic insights
- Designed quarterly university wide software & firmware workshops to spark interest in electrical engineering
- Boosted club participation by through weekly newsletter and building webpages reaching 400+ subscribers

Mentor | Santa Clara University

Aug 2023 – Jul 2024

- Provided structured technical guidance to incoming students, focusing on software engineering best practices, project design, and debugging strategies.
- Led one on one mentoring sessions on academic and professional guidance

Fist Bump | 3rd Place Hack for Humanity 2024

Feb 2024

- Developed a web platform to streamline student event tracking with a calendar view using Dart's Shelf library
- Engineered a unique backend database solution using Dart's Shelf library with 5 different REST API endpoints

The Marina Project | 3rd Place ACM Winter Challenge

Dec 2023

- Engineered a full-stack mobile application using Flutter and Dart
- Integrated 12+ REST APIs to curate music based on geographic location
- Optimized app responsiveness with data caching for a smooth user experience, improved response time by 30%
- Implemented future loading structures to facilitate smooth transition between pages

Park, Bus, and Jam | 3rd Place INRIX Hack 2023

Nov 2023

- Developed a multi-modal transit app, integrating driving, parking, and public transit data through REST APIs
- Created an end-to-end system, managing frontend UI and backend server communication using Flutter and Dart
- Ensured efficient server-client communication by implementing asynchronous structures and caching mechanisms

Nest Notifications | 3rd Place INRIX Hack 2022

Nov 2022

- Developed in Inrix's annual Hackathon competing against 26 teams, utilizing Flutter and Dart to develop an innovative solution for tracking location for friends and family, while integrating Inrix's traffic data
- Designed and implemented a highly functional and visually appealing user interface using Flutter and Dart
